

Optimised drive system for washers

LCS machine upgrade
No. 0046

This upgrade improves the following

- Efficiency
- Environment
- Media
- Quality
- Personnel
- Material

Benefits of the upgrade

Lower servicing costs and high washer efficiency through using a synchronous drive

Suitable for the following machine types

All KRONES washers

Installation with minimum production loss

Approx. 7 – 10 days needed for the conversion work. Conversions can be carried out preferably in connection with a general overhaul or parts repair and with a service engineer deployed from your region.

The following improvements are achieved

- The drive requires practically no maintenance. An oil change is due only every 15,000 operating hours.
- Efficiency is increased by careful treatment of the chain and selective early detection of malfunctions, e.g. chain elongation.
- Drive chain life is prolonged.
- With this system it takes less time and maintenance effort to adjust the chain.
- Motor and gears are separated from each other immediately an unexpected blockage occurs, ruling out damage to the parts affected.
