

Output-regulated fresh water jetting for washers

LCS machine upgrade
No. 0158

This upgrade improves the following

- Efficiency
- Environment
- Media
- Quality
- Personnel
- Material

Benefits of the upgrade

Reduction in operating costs by coupling the injected quantity to the current production output – for the same cleaning result

Suitable for the following machine types

All KRONES washers

Installation with minimum production loss

Conversions are also possible during a general or partial overhaul and with a service engineer deployed from your region.

The following improvements are achieved

- The use of a flow meter, various hardware and software components enables the fresh or waste water consumption for an output lower than the rated capacity to be adapted automatically.
- The fresh water jetting regulates the discharge temperature for large deviations in fresh water temperature.
- The consumption of chemicals and additives is reduced.
