

Peeled label carrier film disposal unit for the Autocol

LCS machine upgrade
No. 0160

This upgrade improves the following

- Efficiency
- Environment
- Media
- Quality
- Personnel
- Material

Benefits of the upgrade

Increase in output on APS 3 and APS 4 self-adhesive label applicators thanks to more efficient disposal of the peeled label carrier film

Suitable for the following machine types

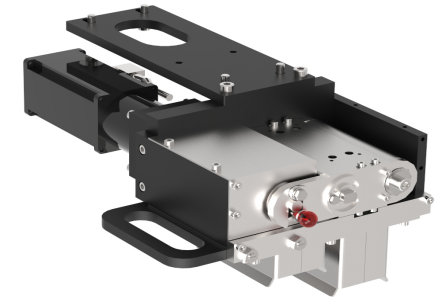

APS 3 stations manufactured from 2005 onwards; APS 4 stations manufactured from 2009 onwards

Installation with minimum production loss

Time required for the conversion approx. 1 day, carried out preferably in conjunction with a general overhaul or parts repair and with a service engineer deployed from your region.

The following improvements are achieved

- The disposal unit is a continuous conveyor. When the machine is used in conjunction with an automatic reel splicing unit or autochange version, it no longer needs to be stopped in order to get rid of the carrier film.
- The empty carrier film can be conveyed into a plastic bag or some other container.
- The capacity of the peeled label carrier film disposal unit is far greater than that of a standard rewinder.
- Disposal is easy and user-friendly.
